Jory Eugene Pestorious

Software Engineer

Summary

As a skilled software engineer with 7+ years of experience in full-stack web development, 3D game development, and distributed systems, I deliver exceptional products with high-quality, efficient code. At We're Five Games, I led the development of our flagship game, Totally Reliable Delivery Service, with over 43 million players worldwide. By fostering innovation and collaboration, I helped grow a team from 4 to 13 members. I'm passionate about coding standards and Agile methodologies and eager to make a significant impact on your project or organization. Let's create something extraordinary together.

Work History

2018-08 - present

Technical Lead

We're Five Games, Minneapolis, MN

- Successfully launched and updated Totally Reliable Delivery Service, attracting 43M+ players. Led to hiring and support of 9 additional team members.
- Implemented Agile methodologies and optimized workflows, reducing time-to-market for updates by half.
- Devised solutions to 3D ragdoll physics gameplay & networking challenges in C# using Unity engine, increasing game feel, while reducing network latency and data usage.
- Spearheaded critical studio operations, including Gitlab management, code conflict resolution, retrospectives, and workflow optimization.
- Collaborated with sound artist and utilized FMOD for adaptive sound interactions, creating immersive experiences for players.
- Led QA framework and build testing to ensure top-notch product stability and quality. Managed Steamworks, Epic backends, and other platforms for builds, data analytics, and user engagement.

2017-10 - 2018-08

Software Engineer

Gravie, Minneapolis, MN

- Implemented style guide standards into code, reducing front-end development time and increasing UI consistency with a reusable framework (AngularJS + ClojureScript/React/Re-frame).
- Developed high-performing applications in Clojure using functional programming and maintained high-quality applications in Groovy/Grails using an object-oriented paradigm.
- Implemented comprehensive testing frameworks, including JavaScript framework tests, automated Geb browser tests, extensive unit tests, and integration testing, improving product quality and user satisfaction.
- Executed complex MySQL database migration queries, ensuring reliable handling of critical data with zero data loss or downtime.

2016-12 - 2017-10

Software Engineer

Search Team, Best Buy, Richfield, MN

- Concepted and developed a high-impact internal web app in Scala, Play Framework, jQuery, Sass, and Docker, streamlining the process of determining item searchability across multiple internal environments and product sites. Significantly increased various teams' productivity.
- Earned recognition as the go-to person for large-scale Oracle SQL database migration projects. Designed and executed complex migration queries that

Skills

C#
Java | Groovy | Scala | Clojure
SQL | MySQL | Oracle Database
Git | Gitlab | SVN
Unity | Game Development
Spring MVC | Play Framework
Responsive Web Design
JavaScript | AngularJS | React
HTML5 | CSS3 | SASS
Scrum Management

preserved sensitive data while avoiding downtime.
- Developed reactive applications in Java 8, Spring Framework, Riak, RabbitMQ, Akka, and Solr, enhancing the retail search experience and empowering customers to find products quickly and easily.

Education

2016-07 - 2016-12

Java Developer, Apprentice

The Software Guild, Minneapolis

- During my time as a Java Developer Apprentice at The Software Guild, I developed multiple RESTful CRUD web applications with Java backends and MySQL databases, and frontends using JSPs, Bootstrap, jQuery, and AJAX.
- I worked collaboratively with my team, following Agile methodologies, test-driven development, object-oriented design, and pair programming. We used tools such as JIRA and Crucible for issue tracking and code reviewing.

Front-End Web Developer, Nanodegree

Udacity

- Completed Udacity's Front-End Web Developer Nanodegree in 2016, co-created by AT&T, Google, GitHub, and Hack Reactor, with coursework focusing on Object-Oriented JavaScript, Design Patterns, Test-Driven Development, Responsive Web Design, Website Performance and Browser Rendering Optimization.
- Proficient in HTML, CSS, Bootstrap, JavaScript, jQuery, AJAX, APIs, and KnockoutJS.

Continuous Education

- Advanced Styling with Responsive Design (Coursera - University of Michigan)
- Agile Scrum Master Training : Case Studies and Confessions (Paul Ashun - Udemy)
- Agile Software Development (edX - ETH Zürich)
- CSS3 (Coursera - University of Michigan)
- Full-Stack for Front-end Engineers (Savage, MN - Frontend Masters)
- HTML, CSS, and Javascript for Web Developers (Coursera - Johns Hopkins University)
- HTML5 (Coursera - University of Michigan)
- Interactivity with JavaScript (Coursera - University of Michigan)I
- SANS Information Security Training (SANS Institute)
- Single Page Web Applications with AngularJS (Coursera - Johns Hopkins University)
- The Complete JIRA Agile Project Management Course (Danny Liu - Udemy)

ESL, Master's Degree

Hamline University, St. Paul

- Earned an ESL Master's Degree from Hamline University in 2015 with a 3.9 GPA, focusing on Advanced Linguistic Analysis, Research Methodology, and Second Language Acquisition.
- Actively participated in campus activities as a Writing Tutor and International Student Support during the course of the degree.

Biology, Bachelor’s Degree

University of Minnesota, Twin Cities

- Relevant coursework: Organic Chemistry, Biochemistry, Pharmacology, Korean Language.
- Graduated in 2011 with a 3.6 GPA.
- Participated in Men's Crew (Competitive Rowing) and Squash Club, and also involved in Mindfulness Club, college mentorship, and literacy programs.
