Jory Eugene Pestorious

Software Engineer

Summary

As a seasoned software engineer with 7+ years of experience in full-stack web development, 3D game development, and distributed systems, I deliver exceptional products with high-quality, efficient code. At We're Five Games, I led the development of our flagship game, Totally Reliable Delivery Service, with over 43 million players worldwide. By fostering innovation and collaboration, I grew a team from 4 to 13 members. I'm passionate about coding standards and agile methodologies and eager to make a significant impact on your project or organization. Let's create something extraordinary together.

Work History

2018-08 - present

Technical Lead

We’re Five Games, Minneapolis, MN

- Successfully launched and updated Totally Reliable Delivery Service, attracting 43M+ players and increasing studio revenue. Led to hiring and support of 9 additional team members.
- Implemented Agile methodologies and optimized workflows, reducing time-to-market for updates by 3x.
- Devised solutions to 3D ragdoll physics networking challenges in C# using Unity engine, reducing network latency and data usage.
- Spearheaded critical studio operations, including Gitlab management, code conflict resolution, retrospectives, and workflow optimization. Streamlined development processes and improved team productivity.
- Collaborated with sound artist and utilized FMOD for adaptive sound interactions, creating immersive experiences for players.
- Led QA framework and build testing to ensure top-notch product stability and quality. Managed Steamworks, Epic backends, and other platforms for builds, data analytics, and user engagement.

2017-10 - 2018-08

Software Engineer

Gravie, Minneapolis, MN

- Implemented style guide standards into code, reducing front-end development time and increasing UI consistency with a reusable framework (AngularJS + ClojureScript/React/Re-frame).
- Developed high-performing applications in Clojure using functional programming and maintained high-quality applications in Groovy/Grails using an object-oriented paradigm.
- Implemented comprehensive testing frameworks, including JavaScript framework tests, automated Geb browser tests, extensive unit tests, and integration testing, improving product quality and user satisfaction.
- Executed complex MySQL database migration queries, ensuring reliable handling of critical data with zero data loss or downtime.

2016-12 - 2017-10

Software Engineer

Search Team, Best Buy, Richfield, MN

- Concepted and developed a high-impact internal web app in Scala, Play Framework, jQuery, Sass, and Docker, streamlining the process of determining

Skills

C#

Java | Groovy | Scala | Clojure

SQL | MySQL | Oracle Database

Git | Gitlab | SVN

Unity | Game Development

Responsive Web Design

HTML5 | CSS3 | SASS

JavaScript | AngularJS | React

Scrum Management

item searchability across multiple internal environments and product sites. Significantly increased various teams' productivity.
- Earned recognition as the go-to person for large-scale Oracle SQL database migration projects. Designed and executed complex migration queries that preserved sensitive data while avoiding downtime.
- Developed reactive applications in Java 8, Spring Framework, Riak, RabbitMQ, Akka, and Solr, enhancing the retail search experience and empowering customers to find products quickly and easily.

Education

2016-07 - 2016-12

Java Developer, Apprentice

The Software Guild, Minneapolis

- During my time as a Java Developer Apprentice at The Software Guild, I developed multiple RESTful CRUD web applications with Java backends and MySQL databases, and frontends using JSPs, Bootstrap, jQuery, and AJAX.
- I worked collaboratively with my team, following Agile methodologies, test-driven development, object-oriented design, and pair programming. We used tools such as JIRA and Crucible for issue tracking and code reviewing.

Front-End Web Developer, Nanodegree

Udacity

- Completed Udacity's Front-End Web Developer Nanodegree in 2016, co-created by AT&T, Google, GitHub, and Hack Reactor, with coursework focusing on Object-Oriented JavaScript, Design Patterns, Test-Driven Development, Responsive Web Design, Website Performance and Browser Rendering Optimization.
- Proficient in HTML, CSS, Bootstrap, JavaScript, jQuery, AJAX, APIs, and KnockoutJS.

ESL, Master's Degree

Hamline University, St. Paul

- Earned an ESL Master's Degree from Hamline University in 2015 with a 3.9 GPA, focusing on Advanced Linguistic Analysis, Research Methodology, and Second Language Acquisition.
- Actively participated in campus activities as a Writing Tutor and International Student Support during the course of the degree.

Biology, Bachelor’s Degree

University of Minnesota, Twin Cities

- Relevant coursework: Organic Chemistry, Biochemistry, Pharmacology, Korean Language.
- Graduated in 2011 with a 3.6 GPA.
- Participated in Men's Crew (Competitive Rowing) and Squash Club, and also involved in Mindfulness Club, college mentorship, and literacy programs.
