Jory Eugene Pestorious

Software Engineer

Summary

As a seasoned software engineer with 7+ years of experience in full-stack web development, 3D game development, and distributed systems, I have a proven track record of delivering exceptional products with high-quality and efficient code. At We're Five Games, I led the development of our flagship game, Totally Reliable Delivery Service, which has captured the hearts of over 43 million players worldwide with 1.25 million monthly active players two years after release. By establishing a culture of innovation and collaboration, I successfully bootstrapped a high-impact team from four members to a talented team of thirteen. With a passion for coding standards and agile methodologies, I am committed to making a significant impact on your project or organization. Let's collaborate and create something extraordinary together.

Work History

2018-08 - present

Technical Lead

We're Five Games, Minneapolis, MN

- Successfully launched and updated Totally Reliable Delivery Service, attracting 43M+ players and increasing studio revenue. Led to hiring and support of 9 additional team members.
- Implemented Agile methodologies and optimized workflows, reducing time-to-market for updates by 3x.
- Devised solutions to 3D ragdoll physics networking challenges, reducing network latency and data usage.
- Spearheaded critical studio operations, including Gitlab management, code conflict resolution, retrospectives, and workflow optimization. Streamlined development processes and improved team productivity.
- Collaborated with sound artist and utilized FMOD for adaptive sound interactions, creating immersive experiences for players.
- Led QA framework and build testing to ensure top-notch product stability and quality. Managed Steamworks, Epic backends, and other platforms for builds, data analytics, and user engagement.

2017-10 - 2018-08

Software Engineer

Gravie, Minneapolis, MN

- Implemented style guide standards into code, reducing front-end development time and increasing UI consistency with a reusable framework.
- Developed high-performing applications in Clojure using functional programming and maintained high-quality applications in Groovy/Grails using an object-oriented paradigm.
- Implemented comprehensive testing frameworks, including JavaScript framework tests, automated Geb browser tests, extensive unit tests, and integration testing, improving product quality and user satisfaction.
- Executed complex MySQL database migration queries, ensuring reliable handling of critical data with zero data loss or downtime.

Skills

C#

Java | Groovy | Scala | Clojure

SQL | MySQL | Oracle

Git | Gitlab

Scrum Management

Responsive Web Design

HTML5 | CSS3 | SASS

JavaScript | AngularJS | React | KnockoutJS

2016-12 - 2017-10

Software Engineer

Search Team, Best Buy, Richfield, MN

- Concepted and developed a high-impact internal web app in Scala, Play Framework, jQuery, Sass, and Docker, streamlining the process of determining item searchability across multiple internal environments and product sites. Significantly increased various teams' productivity.
- Earned recognition as the go-to person for large-scale Oracle SQL database migration projects. Designed and executed complex migration queries that preserved sensitive data while avoiding downtime.
- Developed reactive applications in Java 8, Spring Framework, Riak, RabbitMQ, Akka, and Solr, enhancing the retail search experience and empowering customers to find products quickly and easily.

Education

2016-07 - 2016-12

Java Developer, Apprentice

The Software Guild, Minneapolis

- During my time as a Java Developer Apprentice at The Software Guild, I developed multiple RESTful CRUD web applications with Java backends and MySQL databases, and frontends using JSPs, Bootstrap, jQuery, and AJAX.
- I worked collaboratively with my team, following Agile methodologies, test-driven development, object-oriented design, and pair programming. We used tools such as JIRA and Crucible for issue tracking and code reviewing.

Front-End Web Developer, Nanodegree

Udacity

- Completed Udacity's Front-End Web Developer Nanodegree in 2016, co-created by AT&T, Google, GitHub, and Hack Reactor, with coursework focusing on Object-Oriented JavaScript, Design Patterns, Test-Driven Development, Responsive Web Design, Website Performance and Browser Rendering Optimization.
- Proficient in HTML, CSS, Bootstrap, JavaScript, jQuery, AJAX, APIs, and KnockoutJS.

ESL, Master's Degree

Hamline University, St. Paul

- Earned an ESL Master's Degree from Hamline University in 2015 with a 3.9 GPA, focusing on Advanced Linguistic Analysis, Research Methodology, and Second Language Acquisition.
- Actively participated in campus activities as a Writing Tutor and International Student Support during the course of the degree.

Biology, Bachelor’s Degree

University of Minnesota, Twin Cities

- Relevant coursework: Organic Chemistry, Biochemistry, Pharmacology, Korean Language.
- Graduated in 2011 with a 3.6 GPA.
- Participated in Men's Crew (Competitive Rowing) and Squash Club, and also involved in Mindfulness Club, college mentorship, and literacy programs.
